

Vinay Kumar Gond | Distributed Systems Architect & Founder, Exit Protocol

Rajajinagar, Bangalore, Karnataka

📞 +91 95652 08586 • ✉️ vinay@exitprotocols.com • 🌐 vinaygond.github.io • in [vinaygo](#)
🔗 [Vinaygond](#) • Open to Senior Backend / Platform / Architect Roles

Professional Summary

Distributed systems architect and founder shipping under pressure: zero-to-revenue products, **2M+ requests/day** in production, and platform constraints turned into design inputs. Building **Exit Protocol**, a forensic litigation intelligence platform for asset tracing and financial discovery. Previously scaled **Hydra / XLeadScraper** to roughly **\$500k ARR in six months**. Philosophy: **AI accelerates messy document work; deterministic systems handle proof**; compliance, security, and auditability are architecture requirements, not polish.

Technical Skills

Systems: Distributed architecture, async orchestration, worker queues, rate control, fault isolation, traffic shaping, observability, forensic pipelines, evidence integrity.

Stack: Python (Django, FastAPI, AsyncIO), TypeScript, Node.js, SQL, Bash; PostgreSQL, Redis, Celery, Docker, Kubernetes, NGINX, AWS, GCP, OpenTelemetry.

Focus: LIBR tracing, OCR/document ingestion, transaction normalization, SHA-256 snapshot integrity, AES-256 data protection, AI-assisted review, secure deployments.

Engineering Experience

Exit Protocol

Founder & Systems Architect

Remote

2025–Present

Forensic litigation intelligence for high-conflict divorce, asset tracing, and financial discovery. exitprotocols.com

- **LIBR Tracing Engine:** Built deterministic **Lowest Intermediate Balance Rule** state-machine logic producing **attorney-reviewable work-papers** with visible strategy, ledger agreement, and source provenance.
- **Evidence Pipeline:** Designed OCR-assisted ingestion for PDF statements and discovery packets; normalized transactions into reviewable timelines with duplicate detection and reconciliation checkpoints.
- **Integrity Layer:** Implemented **SHA-256** snapshot sealing, exact file-hash verification, and processing history for tamper-evident, inspectable outputs.
- **Production Stack:** Shipped on **Django, PostgreSQL, Celery, Redis, Docker**; hybrid LLM/OCR flows (Mistral, Gemini) with hard boundaries around deterministic legal math.

Hydra / XLeadScraper

Founder & Lead Architect

Remote

2024–2025

High-throughput data infrastructure; roughly **\$500k ARR in six months**. xleadscraper.com

- **Scale Engineering:** Architected queue-driven worker pools, proxy-aware request routing, token separation, and backpressure controls sustaining **2M+ requests/day** with 99.9% uptime under active countermeasures.
- **Platform Analysis:** Reverse-engineered rate-limiting and co-temporal detection patterns beyond simple volumetric caps, informing isolation and traffic-shaping design.
- **Intent Pipeline:** Built NLP scoring workflows to grade lead quality, shifting revenue from raw volume to higher-intent structured output.
- **Compliance Pivot:** Rebuilt for network isolation, sustainable operation, and policy-aware architecture after late-2024 platform constraints.

Independent

Infrastructure & Systems Consulting

Remote

Ongoing

Backend architecture, high-throughput data processing, technical due diligence, and resilient automation for teams under business, legal, or adversarial pressure.
